WORKING PAPER

This book serves as a guideline on how banks can report their Climate Risk Management & Scenario Analysis (CRMS) implementation. This method generally consist of qualitative reporting on the implementation of all the main points listed in CRMS's primary guidelines found in Book 1 that have to do with governance, strategy, design and analysis, disclosure and implementation planning. In addition, banks are also expected to be able to submit quantitative reports on their Climate Risk Stress Test (CRST) implementation to show the impact of climate change risks on key bank financial indicators such as credit, markets, reserves and bank capital.

We hope that this reporting template can help banks disclose the results of their CRMS implementation to the Indonesia Financial Services Authority (OJK) in a uniform and comprehensive manner. This implementation report should also include each bank's strategy and commitment when it comes to supporting the Indonesian government's Net Zero Emissions goals, as well as each bank's strategy and commitment towards dealing with the impact of risk changes on bank capital, and the obstacles they may have faced alongside any input they may have for OJK for developing better policies related to climate change risks.

BANK INFORMATION

CLIMATE RISK MANAGEMENT AND SCENARIO ANALYSIS (CRMS) REPORTING TEMPLATE

Bank Code : Bank Name :

Name of PIC

Position of PIC

Email :

Mobile Phone Number :

This Reporting Template contains data and information for the banking sector related to Climate Risk Management and Scenario Analysis (CRMS) framework and implementation elements. These include the following:

- 1. Part A. General Guidelines
- 2. Part B. CRMS Implementation Readiness
- 3. Part C. Transition Risks
- 4. Part D. Physical Risks
- 5. Part E. Credit Risk Calculations
- 6. Part F. Market Risk Calculations
- 7. Part G. Key Financial Indicators
- 8. Part H. Executive Summary

How your bank can submit input to OJK for this CRMS Reporting Template:

- a. OJK asks all banks to read and understand its CRMS guidance documents (Books 1 to 6) carefully and provide written responses to these guidelines with appropriate explanations and evidence.
- b. All banks must provide complete responses to help improve OJK's CRMS guidelines in the future.
- c. Documents that have been filled in completely must be submitted via email to OJK's PIC no later than July, 31 2024. Each email submitted on this matter should use the following title format: "CRMS_OJK_Bank Name" (an example of this would be: CRMS_OJK_Bank XYZ)

OJK's PIC

If you have difficulty filling in your responses, questions can be submitted to the following PIC:

No.	PIC	Email
1	Yudhisti Ramadiantio	yudhisti.r@ojk.go.id
2	Jehan Firrizqi Ananda	jehan.firrizqi@ojk.go.id
3	Silvia Adhiarahmawati	silvia.adhia@ojk.go.id

PART A

GENERAL GUIDELINES

All responses submitted must be supported by clear explanations and appropriate evidence. If necessary, banks can also provide examples and illustrations.

No.	Paragraph	Responses
1	The Board of Directors and management are required to carry out effective supervision to maintain their bank's resilience to the negative impacts of climate change risks. Banks must also identify relevant responsibilities in managing climate risks. After going through this identification process, banks have to create new units that are specifically responsible for climate risk management. Alternatively, banks can also assign special responsibility to one of its existing units for handling these risks. In managing and monitoring climate-related risks, all material impacts must be taken into consideration in a balanced manner, and should take company size, business lines and business complexity into account.	<please additional="" attach="" files="" if="" links,="" necessary="" or=""></please>
2	Each bank's Board of Directors and management must ensure that the Bank has a strong understanding of the impact of climate risk and be able to explain its business strategy and risk management for dealing with these risks to all of its stakeholders.	<please additional="" attach="" files="" if="" links,="" necessary="" or=""></please>
3	Banks must begin to integrate climate change-related risk impacts into their internal control framework via a "Three Lines of Defense" system to ensure that their process of identifying, measuring and mitigating climate-related risks is carried out appropriately, comprehensively and effectively.	<please additional="" attach="" files="" if="" links,="" necessary="" or=""></please>
4	Banks must integrate any potential they have for significant or material impacts on climate change-related risk impacts into their business strategies. This allows them to strengthen their resilience and mitigate risks. It also enables them to better at driving necessary transitions.	<please additional="" attach="" files="" if="" links,="" necessary="" or=""></please>
5	Banks must be able to manage and integrate their climate-related risks (especially if these risks are considered to have a significant impact) into their risk management framework with the unanimous approval of each bank's Board of Directors. This must also be done through an approach to identify, measure, monitor and control climate-related risks that are considered significant.	<please additional="" attach="" files="" if="" links,="" necessary="" or=""></please>
6	Banks must continue to improve their ability to build and develop data, tools and methodologies effectively so that they can identify risks related to the impacts of climate change that are considered significant.	<please additional="" attach="" files="" if="" links,="" necessary="" or=""></please>
7	Banks are required to take climate-related risks into consideration as part of their overall risk assessment process. They can do this by identifying and quantifying the impact of risks resulting from climate change that are considered significant.	<please additional="" attach="" files="" if="" links,="" necessary="" or=""></please>

PART A

GENERAL GUIDELINES

No.	Paragraph	Responses
8	Banks must actively work to monitor risks resulting from climate impacts that are considered significant. They must also implement risk controls on a regular basis. Doing so enables banks to mitigate the negative impact of any potential increases in the concentration of climate-related risks (both physical and transition risks) in accordance with their risk profiles and business strategies. This process must be supported by appropriate data, comprehensive risk analysis and clear reporting procedures.	<please additional="" attach="" files="" if="" links,="" necessary="" or=""></please>
9	Banks must understand that climate-related risks (physical and transition risks) can be transmitted into and have an impact on other types of existing risks. They must ensure that their risk management systems and processes take into account the impact of these risks, especially for ones that are considered significant. The impact of climate-related risks can act as a trigger for other types of existing risks. As such, banks must understand and calculate the potential impact of risks being transmitted.	<please additional="" attach="" files="" if="" links,="" necessary="" or=""></please>
10	Banks must plan their own transitions through a process of internal strategic planning and risk management that they can carry out to prepare for changes in the business model. They must do so while still taking into consideration any kinds of risks and potential associated with such a transition.	<please additional="" attach="" files="" if="" links,="" necessary="" or=""></please>
11	Banks must have a scenario design framework that can be used to manage climate risk-related risks and business opportunities. Scenario design in general is a technique that banks can use to identify and assess the potential impact of various events that may occur. In the context of climate change, banks can carry out further analysis to examine the resilience of their businesses and strategies to climate change-relate drisks and measure the impact these things have on their portfolio across various scenarios, including in the event that extreme climate change occurs.	<please additional="" attach="" files="" if="" links,="" necessary="" or=""></please>
12	Banks must ensure that the scenario design and analysis they carry out is relevant, follows specific applicable standards, detailed, and uses appropriate time frames that encompass both short and long terms. Each bank's scenario design and analysis is to be carried out proportionally and in a way that takes into account the materiality of climate-related risks to their business and operations.	<please additional="" attach="" files="" if="" links,="" necessary="" or=""></please>
13	Banks must make disclosure reports related to Sustainable Finance, especially on topics involving the impact of climate risks. These disclosure reports have to be reliable, easy to understand, and be written in such a way that they can support stakeholders in making appropriate decision, while also strengthening the bank's effective management of material climate-related risks.	<please additional="" attach="" files="" if="" links,="" necessary="" or=""></please>

PART A

GENERAL GUIDELINES

No.	Paragraph	Responses
14	Banks must develop a risk management implementation plan related to the impact of climate change. This plan must be disclosed and approved by each bank's Board of Directors and/or Board of Commissioners. These plans must also contain clear schedules that include targets and results. They must also identify existing gaps and include strategies to overcome these gaps.	<please additional="" attach="" files="" if="" links,="" necessary="" or=""></please>

READINESS FOR CRMS IMPLEMENTATION, CLIMATE RISK INTEGRATION, AND DISCLOSURE OBLIGATIONS IN BANKING

Instructions:

- 1. Please fill in the information in the **YELLOW** colored cells.
- 2. Respondents are reminded not to change any part of this Excel file format (for example, adding or removing rows, columns, or tabs; changing the order of tabs; or changing cell colors).
- 3. If you have any input or responses, please fill in "Section A".

B.1. CLIMATE RISK MANAGEMENT AND SCENARIO ANALYSIS (CRMS) IMPLEMENTATION

No.	Questions	Answers
1	Are there other factors that OJK should take into consideration when determining the scope of participation and level of implementation for CRST 2024? Please explain.	
2	In the event that a bank has a parent company or subsidiary company/branch office located abroad, should these banks be obligated to implement CRMS? Please explain.	
3	Do the scenario, specification and timeframe choices that have been given provide banks with an adequate balance between allowing a full assessment of climate change-related risks and being adaptable to modeling capabilities for banks? Please explain.	
4	How relevant is the Delayed Transition scenario developed by NGFS in an Indonesian context? Do you agree with this approach or do you need additional scenarios? Please explain.	
5	How relevant is the Net Zero 2050 scenario developed by NGFS in an Indonesian context? Do you agree with this approach or do you need additional scenarios? Please explain.	
6	How relevant is the Current Policies scenario developed by NGFS in an Indonesian context? Do you agree with this approach or do you need additional scenarios? Please explain.	
7	Are there any specific parameters relevant to Indonesia that need to be considered in refining proposed climate scenarios beyond those provided by NGFS? Please explain.	

READINESS FOR CRMS IMPLEMENTATION, CLIMATE RISK INTEGRATION, AND DISCLOSURE OBLIGATIONS IN BANKING

No.	Questions	Answers
8	Are climate, macroeconomic and financial variables adequate in capturing climate change related risks in proposed scenarios? And do they allow for further expansion of scenarios? Please explain.	
9	Are there other external data sources that can be added to this guidebook? Please explain.	
10	Can OJK's CRST timeframe (short term and long term) capture the impact of risks related to climate change for banks? Please explain.	
11	Do you agree with OJK's CRST Guidelines, which include the risk of forest fires and floods as impacts of physical risks in Indonesia? Please explain.	
12	Do you agree with OJK's CRST Guidelines to measure the quantitative impact of climate on banks only from a credit and market risk perspective? Please explain.	
13	Does your bank currently have plans to develop quantitative models on the impact of climate change-related risks in terms of credit, market, liquidity and operational risk perspectives for both the short and long terms? Please explain.	
14	Beyond the economic sectors listed in the CRST Guidelines, are there additional economic sectors that are important for banks to carry out CRST activities (for reasons that include the size of your bank's exposure to that particular sector or that sector's vulnerability to risks related to climate change)? Please explain.	
15	Does your bank have a methodology for calculating carbon emissions for credit it has provided to the property ownership sector? Please explain.	
16	Does your bank carry out assessments of debtor mitigation and adaptation plans? Please explain.	
17	Does your bank see any future challenges in estimating the impact of climate risk on the MSME segment? Please explain.	
18	To model climate change-related risks in the MSME sector, what methodologies might need to be standardized across industries? Please explain.	

PART B

READINESS FOR CRMS IMPLEMENTATION, CLIMATE RISK INTEGRATION, AND DISCLOSURE OBLIGATIONS IN BANKING

No.	Questions	Answers
19	For banks that are headquartered in Indonesia and have subsidiaries and/or branches abroad, have those banks also considered the impact of risks related to climate change? Please explain.	
20	In the short term, does your bank use a static or dynamic balance sheet approach? Please explain.	
21	In the long term, does your bank use a static or dynamic balance sheet approach? Please explain.	
22	What are the challenges faced by banks in implementing CRMS? Please explain.	
23	Based on the entire guidebook, how long do you think it will take your bank to implement the required reporting? Please explain.	
24	Does your bank collaborate with third parties in developing CRMS? Please explain.	
25	According to your bank, how can the banking sector overcome data gaps for CRST implementation? Please explain.	

PART B

READINESS FOR CRMS IMPLEMENTATION, CLIMATE RISK INTEGRATION, AND DISCLOSURE OBLIGATIONS IN BANKING

B.2. CLIMATE RISK INTEGRATION

No.	Questions	Answers
1	Does the Bank have a governance structure that is responsible for monitoring risks related to climate change? (Does it include details of responsibilities within the organizational framework, description of primary duties and functions, and other related policies?) Please explain this governance process in detail.	
2	How can the Board of Directors ensure that the necessary skills and competencies are in place to oversee strategies for responding to climate change-related risks?	
3	How often does the Board of Directors and the Board of Commissioners receive information regarding climate change-related risks?	
4	How can the Board of Directors and its Committees consider risks related to climate change in planning their bank's strategy and in making decisions that are considered significant? What are its risk management processes and related policies? (Please include information on whether the Board of Directors has considered the trade-offs associated with those risks.)	
5	How does the Board of Directors supervise the setting of future targets in terms of climate change-related risks and monitor progress in the realization of these targets? (Please include information on whether there are performance measurements linked to remuneration policies.)	
6	Members of management are required to be part of the processes, controls and governance procedures used in monitoring, managing and supervising climate change-related risks. Is there delegation of roles for these matters given to specific positions or to specific committees? Please explain.	
7	Risks related to climate change can affect a bank's future performance prospects. Has your bank identified the impact of these risks, especially those related to physical risks and transition risks? Please explain.	

READINESS FOR CRMS IMPLEMENTATION, CLIMATE RISK INTEGRATION, AND DISCLOSURE OBLIGATIONS IN BANKING

No.	Questions	Answers
8	Has your bank looked at current conditions and anticipated the impact of risks related to climate change on your bank's business model and value chain? Please explain.	
9	Material risks related to climate change can influence strategies and decision making including climate-related transition plans. Has your bank disclosed information on how your bank responds (and plans to respond) to the impact of climate change risks in strategy and decision making? (Please include information on how your bank plans to achieve climate-related targets relating to Green House Gas (GHG) emissions in accordance with applicable regulations or legislation).	
10	Has your bank considered the effects of climate change-related risks on financial position and performance, as well as cash flows during the reporting period and anticipated the impact these risks have on financial position, performance and cash flows in the short, medium and long terms? Has your bank taken climate change impacts into account for financial planning? Please explain.	
11	Has your bank considered risks related to climate change and how these risks affect the resilience of your bank's strategy and business model in facing climate change, developments and uncertainty? Please explain.	
12	Does your bank have processes and policies in place to identify, assess, prioritize and monitor climate change-related risks? Please explain the data sources and parameters on which your measurements are based.	
13	Has your bank identified, assessed, prioritized and monitored climate change-related risks and integrated them into your bank's overall risk management process? Please explain how this process works at your bank.	

PART B

READINESS FOR CRMS IMPLEMENTATION, CLIMATE RISK INTEGRATION, AND DISCLOSURE OBLIGATIONS IN BANKING

B.3. DISCLOSURE OBLIGATIONS

No.	Questions	Answers
1	Does disclosure related to climate change risks help market players understand financial risk exposures related to climate change and how banks can manage these risks? Please explain how your bank manages these risks.	
2	What international standards does your bank use as references in preparing disclosures related to climate change risks? Please explain.	
3	What activities do banks need to disclose in quantitative disclosures related to climate change risks? (for example: GHG emissions and portioning of credit/financing throughout sectors deemed to produce high levels of emissions, etc.)	
4	What are the main challenges your bank faces in preparing quantitative disclosures? Please explain.	
5	What is your bank's view of the relevance of quantitative disclosure requirements for understanding the climate change-related financial risks faced your bank?	
6	Are there additional or alternative measures that could better illustrate exposure to climate change-related financial risks?	
7	Can exposure to emissions (and financed emissions per sector) serve as useful measurements for assessing your bank's exposure to transition risks? Please explain.	
8	What is your bank's view regarding the availability and quality of data required for these measurements? (Please categorize your information by sector, activity, region or debtor.)	
9	According to your bank, what additional transition risk disclosure requirements should be added?	
10	Will requiring emission disclosures with the help of a third party help your bank in calculating financed emissions? Please explain.	
11	Can your bank's exposure to physical risk serve as a useful measure for assessing your bank's exposure? Please explain.	

READINESS FOR CRMS IMPLEMENTATION, CLIMATE RISK INTEGRATION, AND DISCLOSURE OBLIGATIONS IN BANKING

No.	Questions	Answers
12	What alternative classification approaches can be used by OJK/other national level agencies in classifying regions or geographic locations that are vulnerable to physical risks of climate change to reduce variability and increase comparability between banks?	
13	According to your bank, what other additional physical risk disclosure parameters need to be added?	
14	What is your bank's view on credit risk in sectors exposed to climate risk (in terms of NPL, loan-loss provisions, etc.)?	
15	What challenges may arise in disclosing credit risks for sectors exposed to climate risks?	
16	According to your bank, what additional forms of disclosure parameters specific to banks regarding bank exposure to climate change-related financial risks need to be added (other than NPL and loanloss provisions)?	
17	What is your bank's view regarding forecast information (short and long term) in risk disclosure parameters related to climate change?	
18	What kind of forecast information would serve as a useful measure for assessing your bank's exposure to financial risks related to climate change?	
19	What challenges does your bank expect to face when disclosing quantitative and qualitative information on the concentration of climate change-related risks? How can these challenges be overcome?	
20	With respect to risk disclosures related to physical risks, would there be any benefit to assessing a bank's risks related to climate change if these exposures were broken down based on broadly defined hazards (such as floods, forest fires, etc.)?	
21	What is your bank's view regarding the structure and design of the proposed templates in terms of assisting stakeholders in understanding the climate change-related financial risks facing your bank?	

PART B

READINESS FOR CRMS IMPLEMENTATION, CLIMATE RISK INTEGRATION, AND DISCLOSURE OBLIGATIONS IN BANKING

No.	Questions	Answers
22	Should disclosures related to climate change risks be required to facilitate comparability between banks? Please explain.	
23	If gradual disclosure arrangements are required, how can they be implemented? What aspects need to be disclosed first?	

Instructions:

- 1. Please fill in the information in the **YELLOW** colored cells.
- 2. Respondents are reminded not to change any part of this Excel format (for example, adding or removing rows, columns, or tabs; changing the order of tabs; or changing cell colors).
- 3. If you have any input or responses, please fill them in "Section A".

			Debtor Emissions								
	Sector Coverage	Scope 1	Scope 2	Scope 3	Total						
1	Agriculture, Forestry and Fisheries				0						
2	Mining and Excavation				0						
3	Procurement of Electricity, Gas, Steam/Hot Water, and Cold Air				0						
4	Construction				0						
5	Transportation and Warehousing				0						
6	Processing Industry				0						
7	Property Ownership and Consumer Credit										
8	Others that Aren't Part of Sector 1 to Sector 7 ¹⁾				0						
9	Total	0	0	0	0						

C.1. GHG EMISSIONS

- ¹⁾ In the event that total credit from Sector 1 to Sector 7 is still below 50%
- ²⁾ The total emissions financed have been adjusted to the method used by your bank. (for example: Total debtor emissions multiplied by the weighted percentage of emissions financed by banks originating from Total Credit in that sector divided by Total Assets of debtors in that sector)
- ³⁾ Total Emission Forecast is the amount of emissions in 2050 that is in accordance with your bank's transition target (for example: your bank has a target to reduce emissions in the banking sector to 10,000t CO2 in 2050).

Total Financed Emissions (tCO ₂ e) ²⁾	Percentage of Emissions Financed (%)	Total Emission Forecast in 2050 3)	Total Debtor Assets
0		0	0

D.2. OPERATIONAL RISKS

(Millions of IDR)

Bank Operational Impact	Your Bank's Projected Operational Impact Loss Value for 2024
Damage to Buildings/Branch Offices	
Machine Damages	
Additional HR Costs	
Please fill in with more details if you deem it necessary.	

⁴⁾ Your bank is expected to report the weighted average of remaining maturities in years with a time reference of December 31, 2023.

D.3. LOCATIONS VULNERABLE TO FOREST FIRES (AGRICULTURE, FORESTRY AND FISHERY SECTOR) AND FLOODING (PROPERTY OWNERSHIP AND CONSUMPTIVE CREDIT SECTOR)

(Millions of IDR)

⁵⁾ Your bank is required to report changes in collateral value during stressful conditions in each region and for the reporting year.

EXECUTIVE SUMMARY

Instructions:

- 1. Please fill in the information in the **YELLOW** colored cells.
- 2. Respondents are reminded not to change any part of this Excel format (for example, adding or removing rows, columns, or tabs; changing the order of tabs; or changing cell colors).
- 3. If you have any input or responses, please fill them in "Section A".

Minimum Information included in the Executive Summary section should align with the previous section and include at a minimum the following things:

No.	Aspect	Information
1.	Organizational Structure for Climate Risk Management	[Your bank is required to provide information about its implementation of POJK No. 17/2023, in particular, information regarding good governance in banks in managing climate-related risks, including information about the organizational structure of climate risk management work units, including Directorates, Divisions and Work Units]
2	Development of Climate Risk Stress Tests	[This is to be done in-house or by a third party, and the name of the third party has to be provided (your bank can have more than one)]
3.	Data sources used	
	a. Transition Risks	[If you use data sources other than those provided by OJK, please provide information on the type/name of data along with the sources used]
	b. Physical Risks	[If you use data sources other than those provided by OJK, please provide information on the type/name of data along with the source used]
4.	4. Data Collection Methodology	
	a. Transition Risk	[If your bank uses a third party's methodology, please provide information on the name of the third party along with the methodology that your bank used, such as the use of debtor emissions data reports, extrapolation, or other approaches, along with details of total debtor emissions data in each sector]
	b. Physical Risks	[If your bank uses a third party's methodology, please provide information on the name of the third party and the methodology that your bank used, such as the collecting of information through survey activities regarding the decline in the value of a debtor's collateral]
5.	Assumptions used in your CRST	
	a. Transition Risks	[If there are other assumptions than those established by OJK, please provide information]
	b. Physical Risks	[If there are other assumptions than those established by OJK, please provide information]
5.	Credit Portfolio Profile exposed to Climate Risk	

PART H

EXECUTIVE SUMMARY

	a. Transition Risks	[This section should be filled with the following information:
		1. Total outstanding credit exposed to transition risk (for example: 4 trillion IDR)
		2. Portion of total credit with reference to Part E (for example: 40% of total credit)
		3. Segments, and
		4. Total number of debtors]
	b. Physical Risks	[This section should be filled with the following information:
		1. Total outstanding credit exposed to transition risk (for example: 2 trillion IDR)
		2. Portion of total credit with reference to Part E (for example: 20% of total credit)
		3. Segments, and
		4. Total number of debtors]
ò.	Profile of Securities Portfolio exposed to Climate Risks	
	a. Transition Risks	[Please fill in this section with your bank's total outstanding securities in IDR, the portion of securities to total assets in IDR, as well as the composition of outstanding state and corporate securities in %]
	b. Physical Risks	
<i>'</i> .	Liquidity Risk Profile exposed to Climate Risks	
	a. Transition Risks	[Please fill in this section with your bank's total outstanding on the HQLA, Cash Inflow and Outflow components that are potentially affected by transition risks, including the LCR ratio]
		For Sharia Commercial Banks, liquidity ratio calculations refer to indicators regulated in the provisions of Sharia Commercial Banks.
	b. Physical Risks	[Please fill in this section with your bank's total outstanding on the HQLA, Cash Inflow and Outflow components that are potentially affected by transition risks, including the LCR ratio]
		For Sharia Commercial Banks, liquidity ratio calculations refer to indicators regulated in the provisions of Sharia Commercial Banks.
3.	Operational Risk Profile exposed to Climate Risks	
	a. Transition Risks	[Please fill in this section with your bank's potential costs arising from operational adjustments in line with its decarbonization efforts towards net

PART H

EXECUTIVE SUMMARY

	b. Physical Risks	[Please fill in this section with your bank's estimated losses due to disasters that result in asset damage and disruption of its operational activities due to physical risks]
9.	Evaluation Results and Action Plans for Managing Climate Risk in the Short and Long Terms	
	a. Credit Risks	[Please fill in this section with your bank's CRST evaluation results, along with your bank's action plans that it aims to carry out in mitigating climate risks as a form of implementing risk management]
	b. Market Risks	[Please fill in this section with your bank's CRST evaluation results, along with your bank's action plans that it aims to carry out in mitigating climate risks as a form of implementing risk management]
	c. Liquidity Risks	[Please fill in this section with your bank's CRST evaluation results, along with your bank's action plans that it aims to carry out in mitigating climate risks as a form of implementing risk management]
	d. Operational Risks	[Please fill in this section with your bank's CRST evaluation results, along with your bank's action plans that it aims to carry out in mitigating climate risks as a form of implementing risk management]
10.	Constraints and Inputs on Policy Development Related to Climate Risks for the Banking Sector	[Please fill in this section with any obstacles your bank faced in managing climate risks in general and CRST in particular, as well as your input on the development of climate risk policy in Indonesia]
